

DATA MINING TUTORIAL

Introduction to Python Libraries

Python

- In the last few years there is an increasing community that creates **Data Mining tools in Python**
 - There are also tools in other languages but we will use Python whenever we can for a common point of reference.
- There are tons of resources online for Python.
- For an introduction you can also look at the slides of the [Introduction to Programming](#) course by prof. N. Mamoulis
- I assume you have installed Python to your laptop by now.

Anaconda

- Installing libraries in Python can be complicated, so you should download the **Anaconda Scientific Python** distribution which will install most of the libraries that we will use.
 - Use Python 3.0
- Installing Anaconda installs a lot of libraries and also:
 - Anaconda Navigator
 - Jupyter Notebook: An interactive web-based interface for running python.
 - Anaconda Powershell: terminal for running commands

Anaconda

- Installing Anaconda will also install Jupyter Notebook,
- It is very convenient for loading and experimenting with data
- We will use it in our examples, and it is recommended for the assignments as well.

Refresh

JupyterLab

1.0.2

An extensible environment for interactive and reproducible computing, based on the Jupyter Notebook and Architecture.

Launch

Jupyter Notebook

6.0.0

Web-based, interactive computing notebook environment. Edit and run human-readable docs while describing the data analysis.

Launch

Spyder

3.3.6

Scientific PYTHON Development EnviRnment. Powerful Python IDE with advanced editing, interactive testing, debugging and introspection features

Launch

Glueviz

0.15.2

Orange 3

3.23.1

RStudio

1.1.456

Installing Packages

- You can install packages from the Anaconda terminal using the command:
 - `conda install <name of package>`
- For example, [Seaborn](#) is a package for Statistical Data Visualization.
 - `conda install seaborn`
- [panda-datareader](#) is a package for loading online datasets.
 - `conda install pandas-datareader`

Changing the notebook default directory

- From the Anaconda terminal type the command:
 - `jupyter notebook --generate-config`
- This will generate `.jupyter/jupyter_notebook_config.py` file under your home directory.
- Find, un-comment and modify the line `# c.NotebookApp.notebook_dir = ''` in the config file to point to the desired directory

Pandas

- Python Data Analysis Library
 - A library for data analysis of (mostly) tabular data
 - Gives capabilities similar to Excel and SQL but also with some of the Matlab and R capabilities for data matrix manipulation.
- In this class we will cover:
 - [Data structures](#)
 - Basic operations
 - [Plotting](#)
- The full documentation [here](#). The short version [here](#).
