

The homework is due on **Wednesday, February 15th, 14:00.**

For this homework you are required to write a reaction paper on network models. You should find a model that was not described in class, and give a summary of its main characteristics. Your description of the model should not be longer than three pages, and no shorter than one page and it should contain the main intuition of the model as well as its basic properties. You should also reference at least one paper that either makes use of this model, or one that acted as a motivation for the model you describe.

For this assignment you should work individually. The quality of your assignment will be assessed by how well you convey the main idea of the model, and how well you synthesize the results of various papers.
